

Diverticular Disease and Diverticular Colitis: Paradigms, Trends and Treatment

Luna, M. M.D.

College of Medicine at Universidad Villa Rica, Mexico

Abstract:

Introduction: Diverticular disease of the colon is very common in developed countries and its prevalence increases with age. Nearly, 60% of the elderly above 55-60 years old may presenting. However, as a large majority of those affected will remain entirely asymptomatic. Diverticular colitis, or the inflammation of the colonic mucosa between the diverticulitis, but not within the diverticula, was once thought to be a complication of diverticulitis. This complication was thought to be secondary to the disordered intestinal motility leading to localized bacterial stasis, overgrowth, and inflammation.

Biography:

Dr. Luna specializes in general surgery, including tumor removal, gallstones, hernias, and performs a variety of complex procedures including breast, gastric and thyroid surgeries. He also performs laparoscopic procedures, such as hernia repair, appendectomy, cholecystectomy and anti-reflux surgery. His official job title is Trauma Surgeon. Dr. Luna was born and raised in Veracruz, Mexico. He attended College of Medicine at Universidad Villa Rica for a Doctor of Medicine degree, and Hospital de Alta Especialidad, an academic affiliate of Universidad Veracruzana in Veracruz for his general
